Features

Class D with active distortion compensation

The most accurate sound reproduction account of less deep feedback

No noticeable thermal distortion when playing low frequencies

Full control of the speaker cone due to extremely low output impedance

No need to use Zobel chains, and since the feedback is taken directly from the output, distortion and non-linearities are corrected, which are included in the signal

Switching power supply with active power factor corrector (PFC), so the efficiency can reach 96%

The power supply is based on an LLC resonant half-bridge converter topology. Rectangular structures typical of capacitor circuits are converted into sine waves, greatly improving efficiency
